Products:

- Metal packaging for beverages, food and household products.

Ball Corporation is a provider of metal packaging for beverages, foods and household products, and of aerospace and other technologies and services to commercial and governmental customers.

Ball takes pride in creating beverage packaging that is smart, practical, sustainable and eye-catching. That's why we've developed everything from the versatile Alumi-Tek[®] bottle, which allows consumers to open and re-close their drinks, to the Dynamark variable printing technology that allows us to print up to 24 design variations per production run. At Ball, we work with customers to deliver a unique packaging experience to consumers and not just a cold drink.

Not everyone looks at metal packaging with the passion and purpose that Ball does. We bring a wealth of experience and an incomparable track record of industry advances to every project. Starting with the aluminum can, one of our largest products manufactured, we can further benefit your brand by adding performance and sustainability. But we don't just sell a catalog of what's already commercially available. When you come to us with a challenge, we take the extra time to determine the right solution for your needs.
